About the plugin

To allow visitors a quick and easy way for contact you by "Call to Action" buttons bar. The plugin displays (also with animation) a highly customizable bar at the bottom of all pages on your site. You can add, modify or delete as many buttons as you want. You can add buttons to contact you immediately and easily (with a simple click) or buttons with URLs to the most famous social media or any URL.

Optimized for desktop, tablet and mobile devices. The buttons are easily customizable for different site themes and they open a link in a new window. Compatibility with Firefox, Chrome, Safari, Opera and Edge. The plugin is available in English, Spanish (Español), Italian (Italiano), German (Deutsch) and French (Français).

Preset buttons

Preset buttons are available for the most popular social channels. The preset buttons have svg icons included, perfect for matching the colors you choose and for high resolution. Here is the list currently available (but which will be expanded with other buttons in the future):

Email	Instagram
Phone Call	Tik Tok
Whatsapp	Download
Skype	Twitter
Facebook	X
Youtube	Telegram
LinkedIn	Website
Map	

Custom buttons

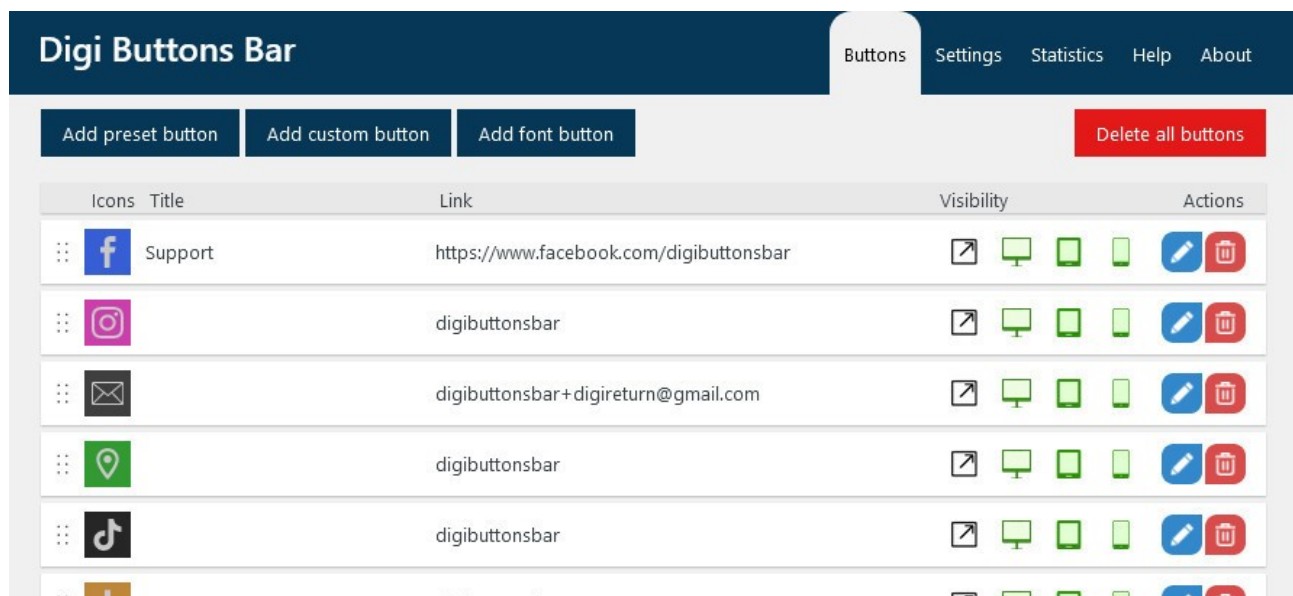

The "custom button" is also available, where you can insert your own image via URL. How to do this is explained in the FAQs.

Font-based buttons

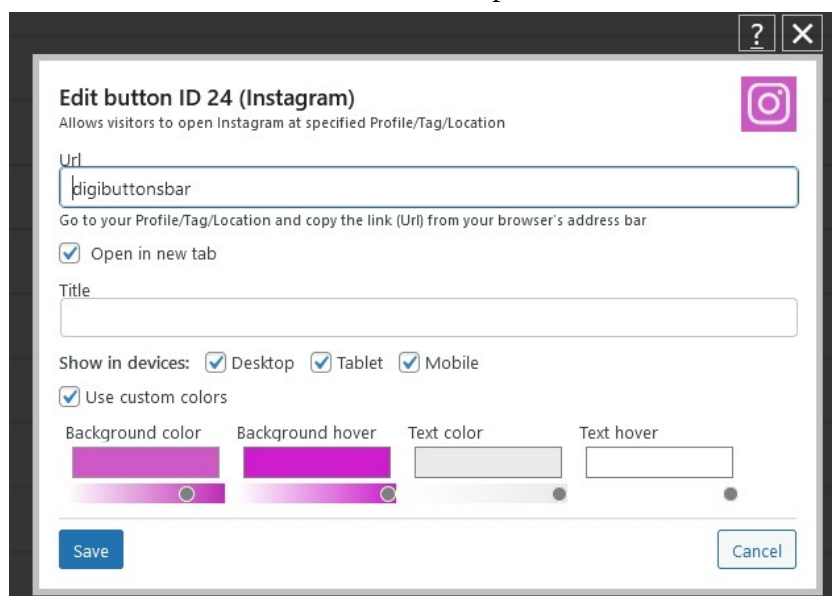

Also available is the "font-based button", where you can insert the code used in the "class". The codes depend on the type of font used. The font, such as Fomntawesome or Dashicons or any other web-based font, must be installed separately. There is an official plugin for fontawesome.

Buttons management

Button management is simple and the interface is intuitive and interactive thanks to ajax technology for Real-Time System. Each button can be modified via a convenient popup provided with specific information and fields. Buttons can be deleted (with confirmation) and ordered simply with Drag and Drop.

Each button can be customized with specified colors via relative option in edit popup.

Installation

After downloading the plugin in zip format you can install it. Go to the backend of your WordPress site and click on Plugins -> Add new -> Upload plugin and activate it.

Now that you've installed and activated the plugin, you'll see a new menu item created inside WordPress called 'Digi Buttons Bar'. First thing first, let's head over to Settings and take a look at what options are available.

Settings

On the settings page you can customize the button bar.

Colors	Determine the color of the background and text (and svg icons) effects	Color picker and opacity	Dark 75% background and light gray text
Animation	Determine the animation to use when starting.	None, fade, slide up, slide right, slide left	None

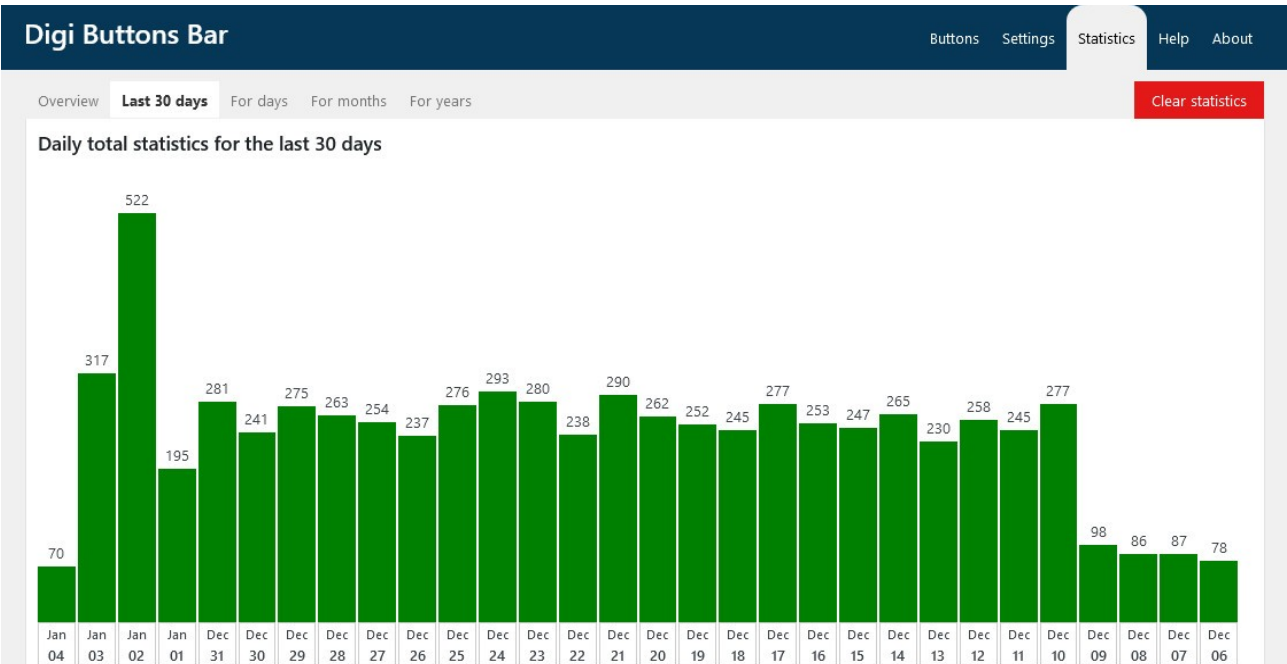

Statistics

This plugin allows you to track and evaluate the effectiveness of a site by measuring visitors' clicks. By combining the statistics of the buttons (call to action) with the statistics of visits of other tools, it will be easier to study new strategies to increase conversions.

Separate statistics of the day for each button:

Statistics of the last 30 days:

8. In the "List" screen select "Add custom button"
9. Fill in the required fields (the title is optional), copy url in the "image url" field

How to add a "preset button" to buttons list

1. In the side menu, click on "Digi Buttons Bar"
2. In the "Buttons" page, click on "Add preset button" and click on your choosed button
3. Fill in the required fields (the title is optional), set visibility and save

How to add a "Font class icon" to buttons list

1. In the side menu, click on "Digi Buttons Bar"
2. In the "Buttons" page, click on "Add font button" and click on your choosed button
3. Insert your class in class field (make sure you enter full class like "fa fa-times")
4. For Fontawesome icons code list see official website (to the version corresponding to the one installed).

Info and Credits

The translations were performed using Google translator.

The plugin does not collect any personal data, so it is ready for EU General Data Protection Regulation (GDPR) compliance. This plugin does not use cookies and does not record any sensitive data.

The images (png, jpg and svg) used are created by us or obtained from uxwing.com and pictogrammers.com. The relevant licenses are present inside the plugin. Some svgs have been modified to improve interaction with the plugin, for example by eliminating the xml tag, fill and height and length attributes.

Once again, thank you so much for purchasing this plugin. As I said at the beginning, I'd be glad to help you if you have any questions relating to this plugin. No guarantees, but I'll do my best to assist.
